

LANCOM 1936VAG

SD-WAN VoIP gateway with VDSL

Count on reliable, powerful performance for your branch sites: By combining two VDSL Supervectoring modems in one device, the data traffic of the LANCOM 1936VAG can be split between the two modems. This so called load balancing increases the available bandwidth and thus reduces bottlenecks in the network. The optional fiber-optic connection enables high-speed Internet and, in combination with the LANCOM Management Cloud (LMC), makes the LANCOM 1936VAG a versatile solution for SD-WAN site networking in medium-sized and large companies.

- SD-WAN – incl. zero-touch deployment and Auto-VPN via the LANCOM Management Cloud
- Multi-WAN – high-speed Internet via fiber optics (GPON and AON modules available separately) and Gigabit Ethernet for connection of external modems (1x WAN Ethernet), 1x SFP/TP combo
- Load balancing for the active/active operation of several Internet lines and maximization of the available bandwidth
- Professional telephony features thanks to integrated LANCOM VCM (Voice Call Manager) & SBC (session border controller)
- Continued use of existing ISDN and analog components via 2x ISDN S0 (NT) for point-to-point or multipoint line configuration, 4x analog (internal) / fax
- 25 simultaneous IPsec VPN connections (100 optional)
- Network virtualization with up to 64 networks on one device (ARF)
- Full-metal housing with front-facing connections and integrated 230V power supply unit for mounting in a 19" rack
- Maximum future compatibility, reliability, and security "Engineered in Germany"

LANCOM 1936VAG

LANCOM SD-WAN – Next-level networking

With LANCOM SD-WAN you can manage and monitor your entire corporate network centrally, cost-effectively, quickly, and stress-free! In combination with the LANCOM Management Cloud, the SD-WAN gateway gives you all the options for an automated setup of secure VPN connections (Auto-VPN) between sites, including network virtualization. Highlight features such as High Scalability VPN (HSVPN) and Advanced Mesh VPN offer you a significant plus in scalability and efficiency for a large number of branches and applications. Furthermore, if multiple WAN connections are defined, they are automatically operated in active/active mode (load balancing), thereby increasing the available total bandwidth. With Dynamic Path Selection and Dynamic Traffic Steering, applications are also dynamically routed via the best connection at any given time.

Powerful Gigabit multi-WAN & load balancing

With the LANCOM 1936VAG, you can flexibly use a wide variety of Internet connections on one device: The gateway can be connected directly to a fiber optic line (FTTH) via the SFP/TP combo port and separately available SFP module (GPON / AON). In addition, the SD-WAN gateway offers high flexibility via Gigabit Ethernet for connecting external modems. With the parallel use of several Internet lines (load balancing: active/active), the LANCOM 1936VAG also ensures ideal load distribution of the data volume and a further increase in the bandwidth provided.

Secure communication via VPN

With virtual private networks (VPN), you use the public medium of the Internet as a communication path and secure the connection in such a way that the communication still remains completely inaccessible to external parties. This SD-WAN gateway offers you 25 integrated IPSec VPN channels for secure encryption, so that the protection of internal company data is always guaranteed when connecting mobile employees, home offices, or branch offices. With the LANCOM VPN Option, you can also upgrade the device to up to 100 VPN channels, so that the infrastructure can easily grow with your needs without additional hardware.

Professional, comprehensive telephony functions

Equipped with the LANCOM VCM (Voice Call Manager), the LANCOM SD-WAN VoIP gateway takes over classic telephony management tasks and integrates any type of telephony component such as SIP, ISDN, or analog. In addition, the LANCOM VCM provides common functions of a Session Border Controller (SBC): This ensures the secure separation of external (unsecure) and internal (secure) networks. For high call quality, voice packets are given preference thanks to bandwidth reservation (Quality of Service). In addition, as a SIP proxy, the VCM enables professional management of signaling and voice data for high security in the setup, implementation and teardown of telephone conversations, including any protocol conversion by means of transcoding. The VoIP gateway conveniently handles the translation between ISDN, analog, and VoIP.
